

The most complete cloud
color platform for
worldwide production

www.datacolor.com/colibri

Colibri® Cloud Platform

Reduce costs and bring products faster to market!

With Colibri, Datacolor offers the most complete color platform to enable you to develop, specify and produce a quality product worldwide. Colibri® is unique, in terms of both the tools it offers its users friendliness.

Predicts quality recipes

right the first time for a wide range of applications, reducing re-work and production of waste

Easy to use

modern, one-software platform for specification and production of colored products

Connects

to the widest range of spectrophotometers and dispensing system allowing flexibility to work with leading suppliers

Reduces cost

with effective waste management and material reuse

Uses APIs

to connect to third-party systems, allowing fast communication of color during the manufacturing process

Integrates

into your business processes for faster product development and production

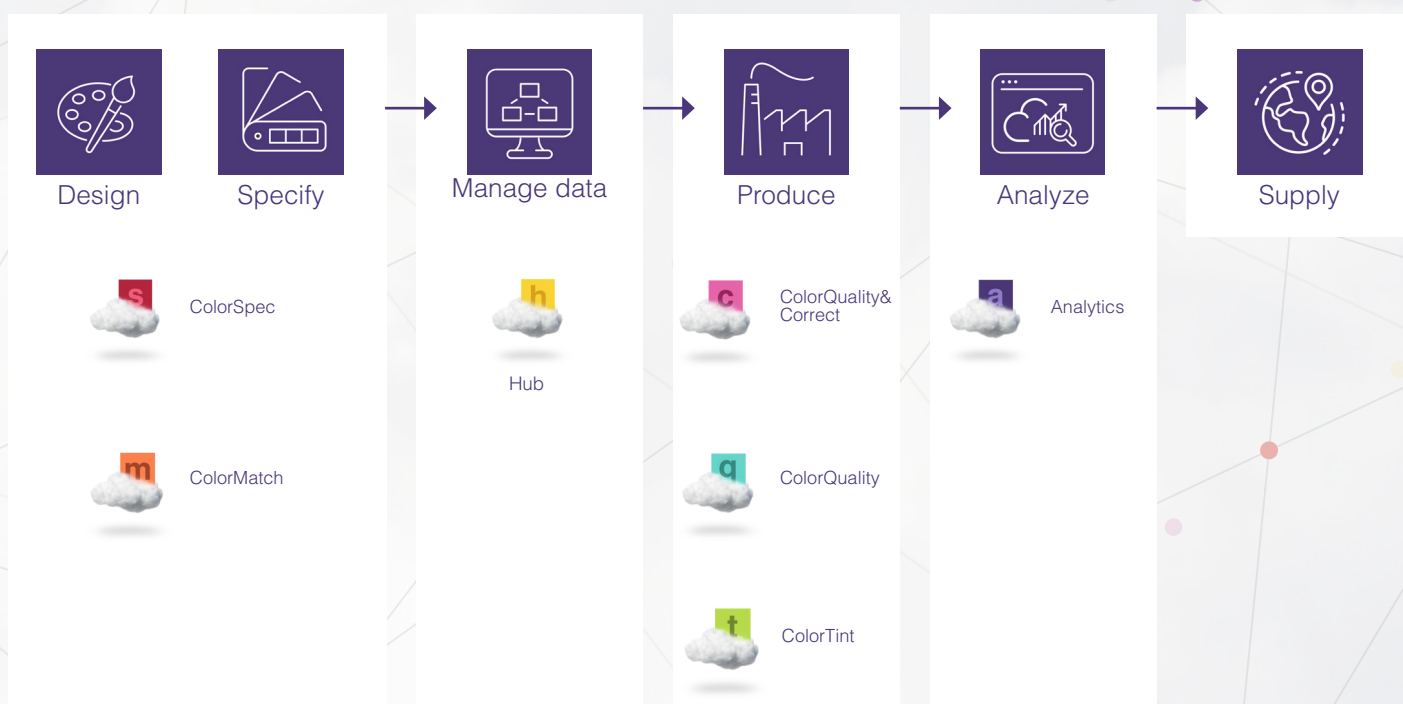

Informs

on product non-conformances during global production, with simplified charts, helping to accelerate the decision making process

Optimizes material usage

to produce cost-effective products

Colibri® is designed for use at all stages of the color supply chain. No matter what the application or industry.

Colibri® Products

Colibri® ColorQuality – Manage quality of colored products globally

Produce and monitor production of your brand and color standards within agreed tolerances. Assess color production and make any corrections required before releasing the product. Track job status online and communicate with your partners, wherever they are.

Colibri® ColorQuality&Correct – Inspect and correct production lots

The ColorQuality&Correct, makes it easier for production to perform inspection lot assessments, making the decision to accept or correct lots easier.

Colibri® ColorTint – Dispense quality recipes

Colibri® ColorTint is designed to control the dispensing of color products on tinting machines. Whether you are handling a new order or a repeat, correcting a color or completing an order, ColorTint helps you to produce the quality your customer expects on every occasion, saving you time and money.

Colibri® Analytics – Drives efficiency

Colibri® Analytics collects, transforms and organizes your data in a way you, management and your suppliers can easily draw conclusions, make predictions and use the information to make informed decision.

Colibri® ColorSpec – Specify and communicate your brands globally

Colibri® ColorSpec enables creative and prepress designers, brand owners, manufacturers and material producers to use real colors in their artworks, to specify color standards for their products, and to communicate brands and designs to their suppliers.

Colibri® ColorMatch – Efficient, powerful and easy to use

Develop new products and match your opaque, translucent and transparent colors accurately and efficiently using one of today's most advanced color matching algorithms.

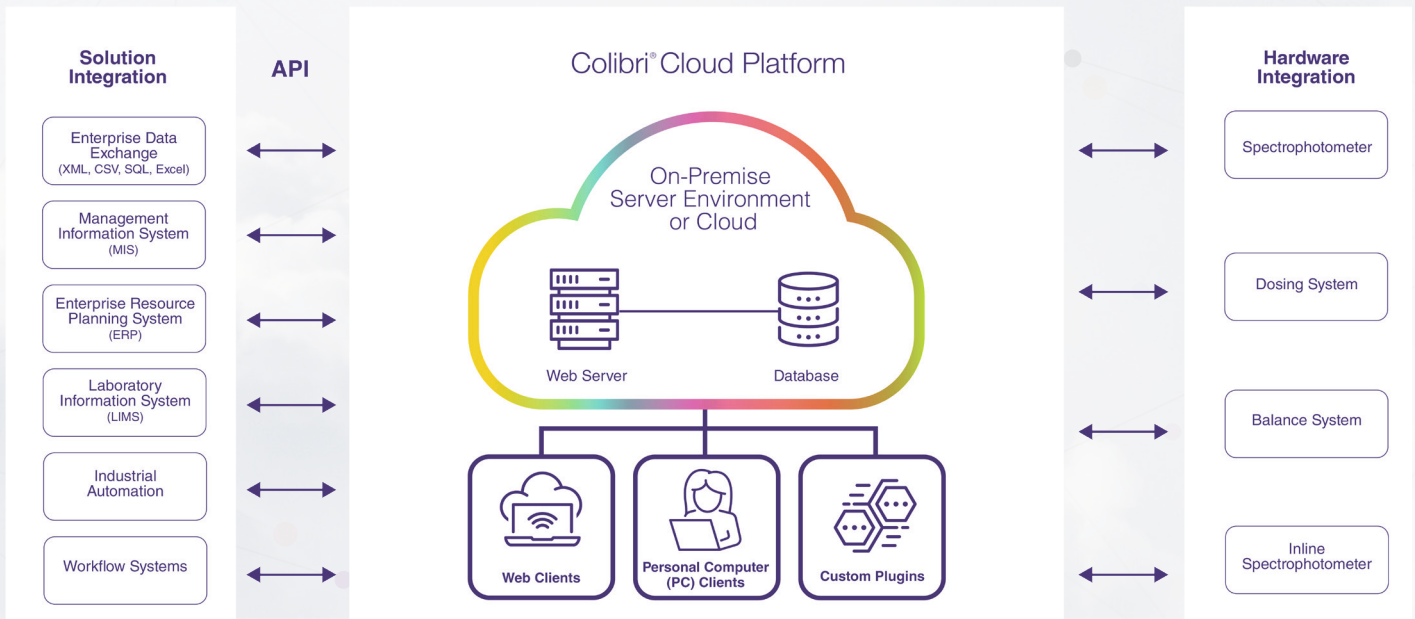

Colibri® Hub – Manage and communicate master data with third-party systems

Colibri® Hub manages master data for production of new and existing products, it plays a key role in the manufacturing process and connects with third-party systems such as Enterprise Resource Planning (ERP), Manufacturing and Execution Systems (MES) and Laboratory Information Systems (LIMS) to allow seamless communication of data.
